TI - ELECTRONIC APPARATUS UNIT
 AB - (JP11040960)

PROBLEM TO BE SOLVED: To design a recording and reproducing device or the like as a unit, to properly combine various units depending an usage and to simplify interconnection among the units.

SOLUTION: This electronic apparatus unit is configured by combining plural electronic apparatuses. Each electronic apparatus is provided with a hook section 3 that engages with an opposite electronic apparatus, a 1st conduction selection 1 that has a projected face 10 fitted to the opposite electronic apparatus, or a 2nd conducting section 2 that has a recessed face 20, to which the 1st conducting section 1 of the opposite electronic apparatus is fitted. The hook section 3 is provided, while facing the 2nd conducting section 2 and engaging with the opposite 1st conducting section 1. The 2nd conducting section 2 is provided with terminals 2, and the 1st conducting section 1 is provided with a printed circuit board 11, with which the terminals 2 are electrically pressed into contact. The electronic apparatuses are interconnected by engaging the hook 3 with the 1st conduction selection 1, fitting the 1st conducting section 1 to the 2nd conducting section 2 so as to make the terminal make electrical contact with the printed circuit board 11.
